

# Daniel Jin

(587) 439-8600 • [djin2001@gmail.com](mailto:djin2001@gmail.com) • [LinkedIn](#) • [GitHub](#)

## SKILLS

- **Programming Languages:** Java, Python, JavaScript, C#, C, XAML, ARMv8, PHP, SQL
- **Platforms/Tools:** Git, Jira, Azure DevOps
- **IDE/OS:** Eclipse, Visual Studio Code, Visual Studio 2019/2022, Windows, Linux
- **Web Technologies:** HTML, CSS, React, MongoDB, WebSocket, Socket.io, Express.js, Node.js, Bootstrap, JSON, MySQL
- **Concepts:** Object-Oriented Programming (OOP), Functional Programming, Data Structures and Algorithms, Agile Methodologies
- **Bilingual:** English, Korean

## EDUCATION

### Bachelor of Science, Computer Science

Sep 2019 – Jun 2025

University of Calgary, Alberta

- GPA: 3.7/4.0
- Dean's List (2020,2024), Jason Lang Scholarship (2020-2024)

## PROFESSIONAL EXPERIENCE

### Software Developer and QA Intern

May 2021 – Jan 2024

Kent Imaging, Calgary, Alberta

- Introduced and developed Kent's first **automation testing** framework using **C#**, **.NET**, and **NUNIT** to deliver multiple automated tests which allowed 4 product releases to be completed within 6 months.
- Collaborated with **Agile/Scrum** teams to design, develop and deliver software features through sprints and stand-ups.
- Reacted flexibly in a fast-paced **startup company** and worked with existing **C#** codebase to implement new features.
- Spearheaded multiple automation projects for the product operations team to maximize efficiency using **C#**, **XAML**, **SQLite**.
- Deployed upgrade scripts for the sales team's customer databases using **.NET**, **C#**, **SQLite** and **Bash Scripts**.

## PROJECTS

### Food Bank Website - *Apache, MySQL, PHP, Bootstrap*

- Designed and developed a **fully responsive** full stack web application to streamline interactions between food bank employees, clients, and supervisors for managing inventory and staff operations.
- Build and normalized a **relational database schema** in **MySQL** and designed supporting **UML** and **sequence diagrams** for system architecture documentation.
- Implemented backend functionality using **PHP** and **JavaScript**, integrated through **MySQL** and hosted on an **Apache** server.
- Developed a user-friendly, responsive frontend using **HTML**, **CSS**, and **Bootstrap** for modern design and mobile compatibility

### University Marketplace Website - *JavaScript, React, Express, Node, Bootstrap, Socket.io, Axios, MongoDB*

- Built a **fully responsive** full stack web platform for University of Calgary students to buy and sell items.
- Designed and implemented full **CRUD** functionality for posts, including a filterable search system to improve item discovery.
- Developed the backend using **Express.js** with **Node.js**, incorporating **JWT authentication**, **Socket.io** for real-time chat, and **Mongoose** for seamless interaction with **MongoDB Atlas** database
- Built the frontend using **React** with **React Router** for navigation, **Axios** for API integration, and **React-Bootstrap** for modern, responsive UI styling.

### Self-Checkout System Application - *Java, JavaFX, JUnit, Eclipse*

- Developed a **Java**-based simulation replicating a real-world self-checkout system, integrating hardware control logic and user interface components
- Designed comprehensive **UML class**, **sequence**, and **state diagrams** to model system architecture and behavior
- Applied core **object-oriented programming** principles to ensure modular and maintainable code.
- Build a **graphical user interface** to simulate customer interactions and system responses in various use cases
- Conducted both **manual and automated testing** using **JUnit** to validate functionality and ensure system reliability.
